

## **Homework 9**

—

## **Boosting**

## Motivation

---

In a previous lecture, we talked about Decision Trees for classification. In this simple form, they are easy to interpret, but often result in rather low quality (low score). We also covered one approach to improve upon them (trading in the easy-interpretability): Random Forests. Random Forests are a bagging technique, an example of Ensemble Learning. There is another Ensemble Learning approach called Boosting, taking a different path regarding the bias-variance-tradeoff. We will cover Boosting in this lecture.

In preparation, in this homework you will review Random Forests.

## Random Forests Recap

---

*Estimated time: 10min to watch the video*

We covered the basic ideas of the Random Forest Classifier in the lecture – the following video will deepen your understanding of this ML algorithm. It is the first of three videos, feel free to watch the following two video as well, if you like.

- ♦ **Watch the following video:** [Random Forests Part 1 - Building, Using and Evaluating](https://www.youtube.com/watch?v=J4Wdy0Wc_xQ)  
[https://www.youtube.com/watch?v=J4Wdy0Wc\\_xQ](https://www.youtube.com/watch?v=J4Wdy0Wc_xQ)

Congratulations!
