

Exercise 09: Transformation into relational schemas

Task 1: Transformation of an ER model into a relational model

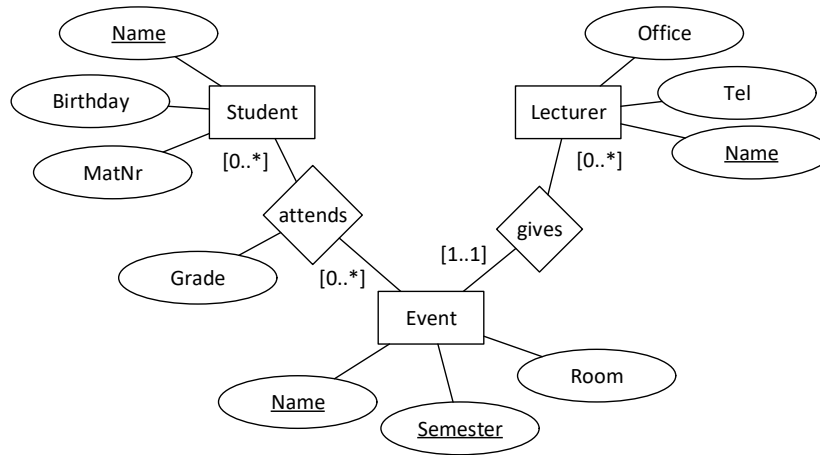

- a) Transform the following ER model into a relational model using the rules for mapping from the lecture. Merge the resulting relations as much as possible and also draw the diagram in crow's foot notation.

- b) Do the same with the following model.

c) Do the same with the following model.

d) Do the same with the following model.
