Computer Vision – Normalization

WS 2026/27
Prof. Dr. Jochen Schmidt

Technische Hochschule Rosenheim

Normalization

A position normalization is to be performed on the following object. The background pixels are 0, the object pixels have the gray value 1. The coordinates of the image start at the top left with (0, 0).

1	1	1	1	1
1	1	1	1	0
1	1	1	1	1
0	0	0	0	0
0	0	0	0	0

a) Calculate the center of gravity of the object.
b) Calculate the angle of rotation of the principal axis.
